

FELLOWES ANNOUNCES LAUNCH OF ARRAY™, THE MOST ADVANCED NETWORKED AIR QUALITY SYSTEM

ITASCA, Ill. – June 20, 2023 – [Fellowes](#), a family-owned company providing trusted workplace solutions for 106 years, is proud to announce the launch of its most advanced networked air quality system, **Array™**, a breakthrough system that leverages cutting-edge technology and Fellowes' proven experience in the air purification space to create a revolutionary indoor air quality (IAQ) solution.

Array™ gives building managers greater visibility and control over the quality of their indoor air and works with Fellowes' new cloud-based software, **Viewpoint**, to provide complete, real-time air quality data anywhere, on any device.

Using its 15 years of experience as a leading innovator in the commercial air purification space, Fellowes developed Array™ to combine the benefits of stand-alone purifiers, HVAC and monitoring systems to detect and improve indoor air quality better and faster than ever before. Array™ is one of the latest in a long line of innovations from Fellowes that dates to its founding, as the company continuously seeks to bring productivity and overall wellbeing to the spaces where work happens.

Array™ is equipped with hospital-grade H13 True HEPA filtration that is 99.95% effective in capturing contaminants as small as 0.1 microns, including viruses, allergens, and pollutants. The system features an integrated suite of IAQ sensors to monitor a space, including particulates (PM10, PM2.5), occupancy, temperature, pressure, humidity (RH), carbon dioxide (CO2) and TVOCs. Fellowes' patented EnviroSmart+™ Technology automatically senses real-time conditions and proactively responds to make sure clean air is always available.

With the Fellowes Array™ Viewpoint dashboard, building managers can remotely monitor Array's performance to gain comprehensive visibility into their building's air quality. Within the cloud-based software, users can schedule maintenance tasks, measure and track air quality and adjust units in real-time.

The Array™ system fits seamlessly into any aesthetic and can be scaled to fit any space, with all products connected on an LTE network to work together more efficiently across a building's footprint.

"With the introduction of Array™, Fellowes aims to take a pivotal role in fostering healthier environments across facilities, entertainment venues, and indoor spaces where people gather," said John Fellowes, President & CEO of Fellowes. "As society emerges from the COVID-19 pandemic, there is a heightened understanding of virus transmission through the air. Array sets a new post-pandemic standard, empowering people to engage with confidence in their surroundings."
