

## CONSULTATION ROOMS ARE THE CLEANEST IN THE PRACTICE

# CLEAN AIR, CLEANER FACILITY

### CUSTOMER:

Huisartsenpraktijk Rozenlaan

### PROJECT:

Air cleaning for GPs

### LOCATION:

Huisartsenpraktijk Rozenlaan,  
Breda, Netherlands

### TARGET AUDIENCE:

GP Practices

### The challenge:

Patients are a source of airborne pollutants at the Doctors. The influenza virus, fungi, bacteria and sometimes unpleasant odors can all be present in waiting areas and treatment rooms. In fact, the air at General Practice Rozenlaan was unpleasant enough for them to do something about it. They contacted Fellowes to install two AeraMax Professional units in the consulting rooms, wishing they'd done so sooner once the benefit became clear.

- » Leaving a window open is not always the solution
- » The ventilation system has insufficient capacity and makes noise
- » Bacteria, viruses and particulate matter float around without us seeing them

### The solution

AeraMax® Professional AM III units were installed in the consulting rooms. These powerful air treatment units are equipped with EnviroSmart technology, intelligent sensors that continuously monitor the occupancy and condition of the room. The sensors detect sound, movement and odours then automatically switch the machine into its optimal setting. When the air is clean again the unit turns into standby mode to save energy and extend filter life.

“AeraMax® Professional effectively cleans the air and removes unpleasant odors in the consulting rooms”

Gillion Marijnissen en André van den Broek GPs

PROFESSIONAL

## The results

AeraMax® Professional cleans the air in four steps. The pre-filter removes larger particles including dust. The Hybrid Filter eliminated unpleasant odours from the practice, while the HEPA filter captures particulate matter (PM2.5 and PM10 ) and also all bacteria , viruses and allergens. A plasma ionizer then electrically charges the last particles to enhance filtration.

AeraMax® Professional air purifiers are designed for installation in busy areas with a high concentration of pollution. A rugged housing, superior components and highly efficient filters combine to give a durable and reliable performance . The result is noticeably clean air.

## The view of staff at Huisartsenpraktijk Rozenlaan

Normally by the end of September/beginning of October we all get our first cold, since AeraMax Professional has been in operation we have had no bother - it works! What's more, we do not smell any musty odours and the practice feels clean.

The 70% reduction in particulate pollution is a benefit that can't be seen, after all we couldn't see this pollution before installing the air purifiers. However, the room still smells fresh at the end of the day and this gives us an indication that the pollution has ended up in the machine. After several weeks we opened the air purifier and were amazed at the amount of dust that had collected on the filters.
